and of the whole Creation of God,

The Epifile Dedicatory of John Langius, Publisher of this Author in Latin.

To the most Prudent and most Excellent Man, the Lord Gabriel Vogtius, Heir of Elbersdorfe, &c. Privy Counsellor of the most Serene and Powerful Elector of Saxony, and Warden of his Coin and Metallick Affairs; as also Secretary of his Exchequer:

John Langim withes much Happinels.

My Lord and lingular Patron,

Forasmuch as your Honour hath been pleased to suffer the Candidats of Nature to have some place with

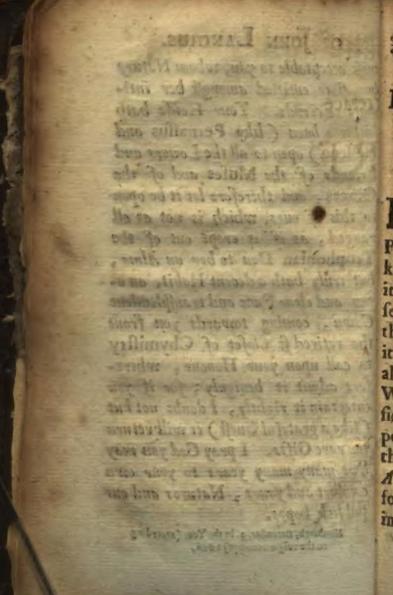

The Epistle Dedicatory

with you, and lately have embraced me (though unworthy) with fingular bumanity 3 I come to Offer this exact little Work of the true Art of Chy. mistry to your Honour & I confess truly it is another Mans, but give me leave berein to help my own weak. ness, being guilty to my self, that could not be able to afford any worthy matter, from my own store, fit for your accomplish'd Mind; and they bave need to borrow goods that are fort at home; yet I hope you will not despise it, seeing that many have offered to the gods those things which are not their own, but are taken from the Sabean Harvest ; especially whilst this Excellent Book feems to be brought forth out of the favourable Bosom of Nature, from a cleer and good intention; and therefore it could not be, nor indeed ought to be, but

of John Langius.

mest acceptable to you, whom Nature long fince entitled amongst ber intimate Friends. Your House bath bitherto been (like Pernassus and Helicon) open to all the Lovers and Friends of the Muses and of the Graces, and therefore let it be open to this of ours, which is not at all ragged, as if it crept out of the Trophonian Den to beg an Alms, but trily bath a decent Habit, an open and clear Face and transplendent Gown, coming towards you from the retired ft Closet of Chymistry to call upon your Honour, wherefore admit it benignly; for if you entertain it rightly, I doubt not but (like a grateful Guest) it will return your are Gifts. I pray God you may live many many years to your own comfort and yours, Natures and our publick bopes.

Hamburgh, December, 9. in the Year (according to the sulgar accompt) 1666.

Preface of John Langius
TO THE

READER.

Benevolent Render ,

Having not long fince obtained this little Book, which I here Publish, from a most excellent knowing Man of these Matters, it pleased me so much, that I prefently consulted to impart it for thy profit; and this drove me to it, that this genuine Author feemed almost to be the only Possessor and Worker, in our Age, of the Phyfical Tincture, and to have Composed his Work to that very end, that he might be known to be an Adeptist when it should come forth, and that the Wanderers in this Art might be reduced to

the

The Preface of John Langius.

the Philosophers. For although of the Lions skin) and being

The Preface of John Langius.

the right path; and then withal within these few years some numthe candour and perspicuity of bers have ambitiously endevoured the Writing, as it were a continu to obtain the Title of True Phied Style of Sendivogius, whole losophy, and presumed under the footsteps this Author doth ever vizard of a false name to instruct, where closely follow, yea some or rather to distract and make times excel, but alwaies indee mad all the World with phantadoth excellently explain withou stick Books; nay have drawn making it his aim at all: Where some ignorant Men, and those not fore I was confident that if obscure ones, upon the stage, not should divulge it, both the afort without the laughter of the more faid worthy intention of the At discreet and learned; yet neverthor would be satisfied, and theless the sharper witted, and such clear light kindled in the day as have converted (as the Proverb night of Errours to very many goes) more familiarly with dead who until this very day either b Philosophers, presently found out dolorous Labour, or presumpt their hooks and baits; so that shortous Learning, or continual is ly after those fruitful promisers, ceffant Sighs (although alas ! not who swel'd with such great words, and then their hopes do fail then became forfaken of their Admido hunt after the great Elixiro ters (like the Ass who was stript within still

left

The Preface of John Langins.

left to themselves, have alwaies born their shot amongst false Coiners, and paid the utmost farthing. But this Author, which we now dedicate to the common good, as he hath the style and thrid of the ingenious Philosophers, and observes it every where, yea as he every way breaths the primordial and ancient Chymistry, and showes himself abundantly by his own figns; fo I hope it will come to pals, this Sun being risen, that the false Stampers will at length quite be dispelled and vanish like the fog and smoke. Truly who, or what kind of Perfon, was Author of this fweet Must-like Work, I know no more than he who is most ignorant; nor (since he himself would conceal his name) do I think fit to enquire

The Preface of John Langius.

enquire so far to get his displeasure; nevertheless it is clear enough he is beloved of God like another Daniel, and is a Man of most hearty true desires, if he still be living; and one who at that Age attained to the Medicinal, Chymical and Physical Arcana's of the Philosophers, in which many others hardly attain the least tittle, and that but very superficially: Certainly it will be a very hard matter to find any one who like to him hath gathered this Art out of Books at fo tender an Age; Thomas Norton professeth he had the knowledge of the White Tindure at Twenty eight years of Age; and Helmontins relates how Theophrastus Paracelsus, at the same Age received the Gold-making Medicine; fo Dio-

a 3 nifins,

The Preface of John Langius.

aysins, Zackarias, and perchance some sew other Young-men, are reported to have attained it : Bul these had it from other mens help and tutoring, which is not fo much to be wondred at, when as therein their capable wit is only to be commended: But to pick out the Roles from the most thorny Bushes of Writings, and to make the true Elixir of Philofophers by his own Industry, without any Tutor, and at Twenty three years of Age; this perchance hath been granted to none, or (as is said) to most few hitherto. Who will gainfay but that in a perticular manner God hath-poured down this occult Science into fuch a wit through the open windows of Heaven; when as I believe millions that have followed the

The Preface of John Langius.

the same study, and run that stage to their old Age, have sweat at the same for fifty, fixty years, more or less, with all the toiling labours could be thought upon. Therefore let us the more respect this highly enlightened Author, in regard that he being (as'twere) so largely overwhelmed by Almighty God with fuch great and unutual Bleffings, hath not done like the Citbarist Afpendins, who used to sing and play privately to himself; But what he had learned without envy, he would as benignly communicate without envy. How envy hath prevailed with many others in their fetting forth these secret Arcana's, and how therewith they have hedged their Writings (as with a Partition-Wall) round about, needs not here to be remem-

2 4 bred,

Stones and Porphyr; the like would become vulgar or common man; who were taught by Oftanes how they should cover the Art with many witty Riddles, but withal not to write without envy. But our Author, being taught in a better School, hath sequestred the Chymical Art from all vulgar errours; and the Sophisms being thrown out, and the curious dreams

The Preface of John Langius. The Preface of John Langius.

bred, every Chymical Searchet dreams of the Conceited hiffed can testisse the same. The Off- away, hath so candidly, clearly spring of former Philosophers and perspicuously described his held it rather to be for their com- own Matters, that you shall not mendation thus to delude their find fo many things more clearly Posterity, and they triumphed set forth by any one, as Aleibea under envy with Chymerical Jug. (or the truth her self) will justifie: lings, just as we read in the Euse- Yea, if those things which Mary bean Greek Writings of Scaliger, Rant (an English woman) by in-That Nemocrates Abderites had ward Revelation promised concerobscurely written of Gold, Silver, ning the making of Gold (that it did also Mary an Habrean wise wo- in the year 1661.) come to pass within an hundred years after, then I doubt not at all but it hath taken some beginning from this. He chuseth to follow Sendivogius his footsteps, yet both with a better order and far more exact distinctions; be it so though, that he taught more obscurely concerning the true subject of Philosophers

gree of purity and subtile fixity, wheren at may be brought, by Nature and a d creet Artist; which Gold thus estentifica ted, is called Our Gold (and no more vul gar) and is the period of the perfection of Nature and Art. I could cite all the Philosophers that write of this Thing, bu I need no witnesses, because my self being an Adeptift, do write more clearly that any heretofore. Let any one believe m that will, and disprove it that can ,"can he that will; this is the reward it shall certainly receive to be in high Ignorance I confess the subtile Wits do fancy many whimsies, but he that is diligent shall find the truth in the simple way of Nature Let Gold therefore be the One True fok Principle of Gold-making; but our Gold is twofold which we require to our work, viz. Mature and Fix, the yellow Latten, whole Heart or Centre is a pure Fire, and therefore it defends the body in the Fire in which it receives depuration; but no thing of it gives way to its tyranny, or fuffers by it. This doth in our Work'supply the place of the Male, therefore it is joyned to our white and more crude Gold as Peminine Sperme; into which it lends If one of animal nature . I make more making

forth its Sperme, and at length both do couple with an infoluble band; to it be- class to the comes our Hermaphrodite, being mighty in both Sexes. ATherefore Corporal Gold is dead before it be conjoined with his Bride, with whom the coagulating 4, which in a is outwards, is turned inwards ; to the altitude is hid, and the profundity is manifelted; so the Fix is, so time, made volatile, that it may afterwards possess (by way of Inheritance) a molf noble, State, in which it may obtains on siculent powerful fixity? It is evident therefore that the whole Secret confilts in \$, of which, a Philosopher saith, xv afre the There is in whatever the Wifeman feeks 3 concerning which Geber faith, Praised be the Most High, who bath created our S and hath given it a nature oberdament all things. For verily if that were not, the Alchymyts might boaft as they will, but their Work of Althymy would be vain. Tis likewife evident it is not the vulgar but the Sophick; because every vulgar ? is a Male that is corporeal, specificate and dead: but ours is spiritual, feminine, living and vivifying, Attend therefore to thole things. that I shall speak of \$, for as the Philo.

CHAP. 11.

Of the Invention of the perfect Magiftery.

He Wise Men heretofore (as many of them as obtained this Art without the help of Books) were led to the attainment thereof on this wife, by the permifsion of God). For I cannot perswade my lelf it came to any of them by immediare Revelation, unless Solumon had it to; which I am rather willing to leave to the Judge, than determine thereof. And yet though he should have had it, what hindreth but he might have got it by fearch

fearch, whereas he requested only wisdom. which God did bestow upon him in suc ingel of any manner that he therwith possess d'all bot Wealth and Peace? And therefore he L . L acher Eipt, as it were, and fearcht out the natur of the Plants and Herbs, from the Cedara Lebanon even to the Hyllop on the Wall; and what man that is well in his wits, wi deny but that he likewife knew the natural strains of the Minerals the knowledge of of the Minerals, the knowledge, of maked which being altogether as pleasant of profitable? But to the purpose, We say that it may very likely be believed. That the first Adeptiff that injoyed this Magneten (amongst whom was Hermes) who had no plenty of Books in those days did no at first seek after a more than perfect perfection; but only a simple exaltational the imperfect Metals to a regal condition: and when they perceived that all Metallick Bodies, were of a Mercarial Origin nal, and that g was both as to its weight and homogeneity most like unto Gold, which is the perfecteft of Metals, they therefore endevoured to digelt it to the maturity of Gold, but they could not effect it by any fire. Therefore they comfidered with themselves, that there was requilite

requifite, besides the external heat, an in+ to oming alm ternal one; if they will accomplish their & just hay intentions. This heat therefore they fought were walky after in most things. First of all, they was and diffilled out of the lesser Minerals most rong exceeding hot waters, and with them man valle. they corroded the 2; but they could not by any Art accomplish it this way, fo as and the cause the g to change or alter his inwit Bream trinlecal proportions ster because all the corrolive waters were only external A- but extrao gents, after the manner of fire, though sputs of all lomewhat different, -But these Menstruums (as they call'd them) did not abide this qual with the dillalved body, Being by that same reason confirmed, they rejected all and primal Salts, one Salt only excepted which is the first Ens of Salts, the which dissolves all wy. But Metals, and by the same work coagulates q: but this is not done but by a violent way, and therefore that kind of A. Ly night gent is again separated entire, both in the weight and vertue, from the things it is put to. Wherefore the Wilemen did at impalit & length know and consider that in g the f watery crudities, and the earthly faces, did as and of hinder it from being digelted; which be- a motion and ing fixed in the roots thereof, cannot be a agend and

in some thing lifter yet

regular Thingon the wife Maje how of rooted my whore in La significan, well bring radically instruct cannot be

also y & some where rooted out, but by turning the whole compound in and out. They knew, . fay, that & if it could but put off their things, it would presently become Fixi Duraction olso ner for it hath in it self a fermental Sulphur of which, even the smallest grain would be sufficient to congulate the whole Maran in more curial Body, if only the Faces and Cru dities could be removed. This think therefore they attempted to bring to pas by various purging it, but in vain; fort a-the will nuch as the forelaid Work requires both I was saily mortification and regeneration, for which there is need of an Agent. Though length I 4 Ry lai they knew that I was destinated (in the my aus reprobowels of the earth) to have been a Me Tal, to which intent it retained a daily motion, as long as the fitnels of the place. and other externalley well disposed, and significant population but there being by accident coraccord; to that it is be for and held as a certain thing deprived of mot of the same on and life. But now an immediate to grels from privation to habit or form

CHAP. 12.

Of the manner of making the perfect Magistery in general.

TE ought to give immortal thanks to God, because he

hath shewed these Secrets of Nature to us, which he hath hidden from the eyes of most men. Those things therefore which are freely given to us by that x of hatung great Giver, we will lay open freely and much and Lithfully to other studious men. Know therefore, That the greatest secret of our Operation, is no other thing than a cohobation of the Natures of one thing above the other, until the most digested virtue be extracted out of the digested (body) by the Crude one. But there is hereto requilite, first, an exact preparation and fitness of the things that enter into the property Work; secondly, a good disposing of external things; thirdly, things being thus prepared, there is required a good Regimen; fourthly, a fore-knowledge of the appearances in the Work is required, that your procedure therein be not blindfold; fifthly, Patience, that the Work be not haltened, or head-longly governed. Of all which we will speak in order, as much as one Brother to another.

CHAP. 13.

CHAP. 13. Of the Use of a ripe 2, in the Work of the Elixir.

ty of the gand have delivered many secrets of get, which (before me inppose our selves safe, in any one place were barren enough to the World; bei hing. We oftentimes take up Complaints Cause almost all Chymical Books do mand the Lamentations of Cam unto the bound either with obscure Anigmes, or Lord, Behold who joever shall find me, shalk But from Sophistical Operations, or with a heap of will me. We Travel through many Natirough and uncouth words 32 I have not this, just like Vagabonds, and dare not done so, refigning my will in this thing m take upon us the Care of a Family, neither do we possess any certain Habitatiperiod of the World) feems to mem on. And although we possess all things: Therefore I do no mare fear that the Antiore are we happy in, excepting speculawill be disesteemed, far be it from me, tion only, wherein we meet with great sawill be diletteemed, far be it flow will de disfaction of the Mind? Many do believe wish, That Gold and Silver would at la be of as mean in elteem as Dirt, while hath been hitherto the great Idol adored by the whole World, then we who know ave chosen a more we have run, we thefe things should not need to studiously these things should not need to studious wholoever hath once escaped the emi-

selves to have received (as it were) the Curle it self of Cain, for which we weep and figh, that is to fay, We are driven, as twere from the face of the Lord, and from the pleatant Society which we heretofore had with our Friends, without fear. But. now we are toffed up and down, and as n were beset with Faries; nor can we be about the opening of these Treasures Jet can we use but a few. What therefend it self in external Honour. I could that are strangers to the Art) that if they should enjoy it, they would do such and fuch things; so also even we did forherly believe, but being grown more lave cholen a more fecret Method. For nent

1 thereday

pent perils of his Life, be will (believe me) become more wife for the time to come. Tisa Proverb, Batchelors Wive and Maids Children are well cleathed in mourifhed. I have found the World placed in a most wicked posture, so that there is scarce a Man tound, whatsoever Face he bears of Honelty and how loever he feems to heed publick things. That doth not prepound unto himself, some private, bale, and unworthy end. Nor is any mortal Man able to effect any thing alone, no not in the works of Mercy, except he would rup the hazard of his Head; which my felf have of late experienced, in some strange or forreign places, where I have administred the Medicine to some ready to dye, distressed and attlicted with the mileries of the Body: and they having recovered miraculoully, there bath presently been a sumour spread of the ! lexir of the Wife men, infomuch that once I have been forced to flie by night, with exceeding great troubles, having changed my garments, fliaved my head, put on other hair, and altered my name; elle I had tallen into the hands of wicked Men, that

lay in wait for me (meerly for suspition only accompanied with the most greedy thirst after Gold.) I could reckon up many fuch like things, which will feem ridiculous to some; for they'll lay, Did I but know these and these things, I would do otherwise than so: But yet let them know, that it is a tedious thing for ingenious Men to have converse with blockish Men. And as for those that are ingenious, they are subtile, crafty, quick-lighted; and some of them have as many eyes as Argus; some are curious, some are Machiavilian, that search into the life, manners, and actions of Men, most throughly, from whom to hide our telf is very difficult, especially if there is any familiar knowledge (or converse.) If any one doth think thus of himlelf, viz. That he would do so and so (were hea Poliellor of the Stone) I would willingly fay unto him thus (orz.) Thou art perchance a familiar acquaintance of an Adeptifi he would prefently consider with himself; . f -and fay, This is empossible " for home and in the far the far the gone and the state of one mliar converse with him, it could not be hut at that I should finell it out. Thou that ima- at at free

thou that others do not abound with as

much quick-lightedness as thy selt, who

would be able to discern thee? For its expedient to have converse with some. elle thou shalt seem to be another quick Diogenes. But if thou affociate thy self with the Vulgar, this is unworthy; but if thou shalt contract familiarity with Wifemen, it behoves thee to be most highly wary, least some of them discern thee, with the same facility as thou believelt thy felf capable of finding out, as 'twere, Line mon another Adeptift (thou being ignorant of the known Secret) If only thou wert and to dicemable to have a familiar confortship with mered a systhim, thou wilt not lo readily discern That an opinion, being but a conceited one, she conjecture shall be sufficient to may cance y-sprocure a lying in wait for thee; for The Iniquity of Men is so great, that we a sure often known some Men to have been strangled with a Halter, yet notwithstanding were strangers to the Art. Twas sufficient that some desperate Men had heard a report of luch an Art, the knowledge of which fuch once bore the

name to have. It would be too tedious to reckon up all things, which we our felves have made tryal of, we have feen and heard concerning this thing. Moreover as concerning this present Age of the World, rather more than in any former one, Who is it that pretends not to Alchymy & Infomuch, that thou shalt hardly dare to stir thy foot, except thou defirest to be betraid. If thou dost but do any thing fecretly, this wariness of thine, will stir in some a zeal of throughly searching thee out, even to the bottom. They'l tattle of counterfeiting Money, and what not? But then if thou art a little open, and some unwonted things done by thee, whether in Medicine or Alchymy, If thou shouldst have a great weight of Gold or Silver, and wouldft fell it, any one would admire readily, from whence to great a quantity of the finelt Gold and parelt Silver should be brought; whereas luch Gold is scarcely brought from any place, fave only Guing or Barbary, and that in the fathion of molt small fand: but now thine being more noble than that, and in a mailie form, will not want a most notable rumour. For Buyers are

Dot

39

not so stupid, although they should (like Children) play with thee, and fay, Ow eyes are font, come we will not fee; but if thou dost come, they will even see, even but out of one corner of thy eye, fo much as is sufficient to bring upon thee the greatest Misery. For Silver is by our Art produced so fine, that no such is brought from any place, That which is brought out of Spain is the best, it doth fomewhat excel in goodness even English sterling, and that in form of plain Money, which is transported by Theft, the Lawer of the Nations prohibiting it. If there fore thou shalt sell a quantity of pure Silver, thou halt even already betrayed the felt: But if thou adulteratest it (being not a Goldsmith) thou runnelt the hazard of thy Head, according to the Laws of England, Holiand, and almost of all Nations, bywhich'tis provided, That every Dererioration or allaying of Gold and Silver (though according to the Goldsmiths Balance) yet if it be not done by a profesfed and licenced Metallourgist, it will be accounted a Capital Crime. We have known the time that when we would have told so much pure Silver, as was

of fix hundred Pound value (in a forreign Country) being cloathed like Merchants (for we durst not adulterate it, because almost all Countries hath its standing Balance of the goodness of Silver and Gold, which the Goldsmiths do easily know in the Mass; that should we pretend it was brought from hence or thence, they would presently distinguish by their Probe or Tryal, and apprehend the seller) they presently said unto us that brought it, This Silver is made by Art. We demanded the reason of their saying so, They replied only thus, The Silver that comes out of England, Spain, &c. we are not now to learn bow to know it, but this is not eng of these kinds: which when we heard, we privily withdrew and left both the Silver and the price of it, never more demandable. Moreover if thou' shouldst fain a great quantity of Gold brought from eliewhere, but especially of Silver, this thing cannot be so private, but a rumour will be spread thereof, the Ship-Master will say, such a quantity of Silver was never brought by me, nor can it come into the Ship, and every bedy be thereof ignorant; and when others thall

D 4

bea

hear thereof, that were wont to buy it. they'l laugh and lay, What? Is it a likely thing, that this Man can get Inch a Muss of Gold and Silver, and put it into his. Ship, there being such strickt Lawes that forbid it. to come ale it and so sinickt a charge to prevent it ? "Thus presently twill be blazed abroad, not in If all in the bordering Countries. We being taught by thek dangers, have determined to lye hid, and will communicate the Art to thee who dreamest of such things, that so we may fee what publick good thou wilt enterprife, when thou that have obtained it. We therefore lay, as heretofore I taught that g was necessary in the Work, and , so we full have delivered fuch things concerning of the particle supplies which will be defired, with out which & will never receive a proa fitable congelation for the supernatural work for Work. X Sulphur doth (in this Work) fur T fupply the place of the Mile, and who Toever undertakes the Transmutation-Art Fr. without it, all his attempts will be in a the God . vain; for all the Wifemen affirm, That there can be no. Tincture made without

its Latten, which Latten is Gold, without any double speaking. Hence the noble Sendinogius faith, "The Foel (believe of stome & ! me) will not find our Stone, no not in and But win Gold; but the Wiseman will find it in the Dung, That is to fay, In Gold (which is the of the sophi) the tincture of Gold- (... o fy ness lies hid. This though it be a most digested body, yet is it incrudated and made raw, in one only thing, viz. Our Mercury, and receiveth from I the multiplication of its own Seed, not so much in weight as in vertue. And although very many of the Sophists do feem fophiltically to deny this thing, yet verily lo it is as I have faid, that is to fay, They tell us that common Gold is dead, but that theirs is alive; so in like manner a grain of Wheat is dead, that is, the germinating activity therein lies supprest, and grands and would eternally remain to, should it soil is was be kept in a dry ambient Air: but let it God, well is be but cast into earth, and it presently corporal & receives a fermental life, it swells up, is mollified and buddeth. Even to is the case Es G. D. with our Gold, it is dead, that is, its volgar, 22 vivifying vertue is fealed under abodily ? Las Lead is thell, as itis with the Grain, although dif. Is guicking

ferently, according to the great diffea rence betwixt a Vegetable Grain and much or is con Metallick Gold. But even as a Grain re mains perpetually unchanged in a dy Air, is destroyed in the fire, and vivined in the water only, ween fo Gold, that is uncorruptible in every Element, durable water only, was to Gold, that it is uncorruptible in every Element, durable water only, even through every Age, is reducible. in our water only, and is then living and ours. Even as Wheat fown in the ground Husbandman's Seed-corn, en ber for Bread or other uses, as well as for Seed: seed as for seed it is with Gold, as long as it is in the form of a Ring, a Vessel or Mony, 'tis the vulgar Gold, but as concerning its being In the former respect it is called Dead, work or fam because it would remain unchanged even to the Worlds end; in the latter respect in it is faid to be living, because it is so powhich power is capable of being brought into Act in a few daies, but The former then Gold will be no longer Gold, but the Chaos of the Sophi; therefore well the Chaos of the sophi; therefore well that their philosophers fay, That t Though is all Gold 3 *Which difference contineth in odnowed approximes they agree, yet o's is in politic the living and power in few Days may be frought into it of the section sophing on the proportion of the section of the sec golg - the composition will at & with visible of our ate us in warms water but not the other, for one

through

provid excepts.

through many Tryals and Mixtures till all the feculency be removed, and the pure remain, which is then not without all Heterogeneitie; yet we melt it not for so the tender soul is lost, and become as dead as Gold vulgar, but wash it is the water, in which all but our matter consumed, then is our body like a Crows bill; afterward melt it with a fire of for ling, and file it; then tis Prepared: But I needs an internal and an effential Purgation, which is an addition of a true ? of about & orderly and by degrees, according to ordusely accorthe number of the Eagles, then is it st by sandically purged. This is no other than of Eagles our Gold, which if you know to leps rate without violence, and then to exalt each a part, and after to reconfume them thou thalt betwixt them have a conception, which will give thee an Infant more noble than any fublunary thing whathever. This Work Diana know to perform, if the be first infolded in the invielableurms of Venus. Pray the high Go to reveal this Mystery to thee, which as former Chapters have disclosed to a wordand where that Secret is couched, there is not a word or stop superfluous or de-

fections. But farther, It also requires x away the anaccidental Purgation or Mundification wel street to wash off the external defilements that was of on are cast out of the Centre; but This is cast from the not so absolutely necessary, but yet this ender out -Labour haltens the Work, and therefore we superficing is convenient. Take therefore thy 2, which thou halt prepared by a convenient number of Eagles, and sublime it thrice from common Salt and the Scoria of Mars, grinding them together with Vinegar and a little Sal Armoniac until the & disappear 5 then dry it and distill it by a glass-Retort, by a fire gradually encreased, even until the whole & ascend. Repeat this three times (or oftner) afterwards boyl the gin the Spirit of Vinegar an hour long, in a Chember, or a glass with a broad bottom and a narrow neck, fometimes strongly shaking it; then decant or pour off the Vinegar, and wath off the fourishness with Fountain-water, poured on again and again; then dry up the ?, and thou wilt wonder at its bright- a Soin Sand nels. Thou mayest wath it with Urine, or 'Vinegar and Salt, and so spare the sublimation, but then diffill it at least four xaftinger times without addition," after thou hast lave make

your last Publing it in it chang it look rainy hime. Inen on it is Eighted vinegas & along, thatma it now is the in small, as removing as the brank special it possering on miss it it are which is no more . Then wall it will

class maysl price the spirit

perfected all the Eagles, or washinge, wi-Thing the Chalybeate or Steel Retort eve ry time with ashes and water; then boy! it in distilled Vineagar for half a day, stirring it strongly sometimes, and pour off the blackish Vineagar, and pour of new; then wash it with warm water (Thou mayelt free the Spirit of the Vineagar from blackness, by redistilling it, and 'twill be as vertuous as before:3 All this is for the removing the external uncleanness, which doth not adhere to the Centre, and yet 'tis little more obstinate in the superficies than you are aware of: which you shall thus perceive: Take this & prepared with his Engles, viz. feven or nine, and amalgamate it with most purified Gold, let the Amalgama be made in a most clear paper, and thou shalt fee that the Amalgama will defile the paper with a dulkish blackness, but yet this Faces or defilement thou mayest prevent by the foretaid distillation, boyling and gitation, or stirring it; which Preparation doth very much promote or hasten the Work.

CHAP. 16.

Of the Amalgamation of the & and Gold, and of the due weight of both.

Hele being rightly prepared, Take x Tels of & Gold subtily filed, one part, of g two we of mixed tar; that is to say, heated with boyling water (out of which being taken it dryes Stone or Iron (but this last is not so good) or Box; "but the Stone or Glass pettle is best. (I am wont to use a white Coralline pettle) Grind it I say strongly, until it be made impalpable; grind it with as much their Colours, then fee the confiftence or temperature of it; if it be plyable like butter then it is not too hot nor yet cold; but yet so that the Amalgama being declined (or bowed of one fide) doth not permit the 2 to run, like an hydropical

CHAP.

parts, put it in an heated Marble Mor- 2 pu presently, and holds the heat a long time) & grind it with an Ivory Peltle, or Glass, xor wha diligence as Painters are wont to grind villa offer me

intercutal water; the confiltence thereof is good, but if not, add as much of the water as is sufficient to make it of this confishency. This is the Rule for Mixture, that it be most readily plyable and most soft; and yet can be made up like round pellots, like as Butter mar which though it yields to the easielt touch of the finger, yet may be made up into balls by a Washing-woman. Observe the alledged Example, as being the most exact Example; because, as Butter, though it be turned of one fide, yet it doth not pour out, or let go any thing from it fell , that is more liquid than the whole Male is, *In like manner is our mixture, be shed have this fign be given either in a double or in his sign what treble proportion of the & to the Body, a 2000 or allo in the threefold of the Body to x 10 the Difficulto the fourfold of the Spirit, or in 1 of my y in double to treble: and according to the nature of the g, or difference, the Amat will be foster or harder; yet be or softer; yet alwaies mindful that it come together inwere remarkable pellots and those pellots too being laid by, do so concreate or hold together, that the doth not appear more lively in the when being land aside as not moved may see better Randen smit y & may not appears quicker in the bollow then als the top.

bottom than in the top. For Note that if x in in it be permitted to rest quiet, the Amalga- aring stime, me hardens of its own accord. The con- it will grow fittency thereof, is to be indged in the oury Raid, y sgitation or stirring it; and if then it be super then i plyable like Butter, and finficreth it self to the judges w be made up into balls, and these pellots as it is was the gestill of being put in clean paper are of an equal if then it is liquidity, the proportion is good. This being done, Take the Spirit of Vinegar x paper and and dillolve in it a third part of its own woung will weight of Sal Armoniae, and put there grow hand uni form by on o and v, formerly amalgamated, put son yt the it in a glass with a long neck, and let it cotton bu boyl for a quarter of an hour, with a not more liquid then throng Ebullition; then take the mixture top, the pro out of the glats, separate the liquor, heat portion is gon the Mortar, and grind it strongly as above, and very diligently; then wath off all the blackness with warm water, put it your fay in again in the former liquor, and boyl wastymate it again in the same glass; then again grind it strongly, and wash it. Repeat this Labour until thou canst not get off the ctorate any more colour of blackness from the x bright male man, by any Labour; then the A- xide most malgama will be white, like the pureft Sil- with silver ver, and most polite, garnifled with a

wonderful brightness. Observe even pet the temperature of it, and beware it be exquifitely right, according to the Rule above-given; if it be not, make it fo, and proceed as above. This is a tedious Labour, yet shalt thou see (by the ligns appearing in the Work) thy Labour recompensed; then boyl it in a pure water, pouring it off and repeating it, until all the faltness and Acrimony be vanished: Record the then pour out the water and dry the Aleast water malgama, which will foon be done: But that thou mayelt be more secure (because and break the vessel how big soever it be) lange now ftir it or work it upon a clean paper, with to thoughe top of a knife, from place to place, went of a "untill it be dryed exceeding well, then proceed as I shall teach thee.

Secrets Revealed.

CHAP. 17.

Of the Preparation, Form, Matter, and Closing the Vessel.

Hou shalt have an oval or round I glass, so big as to hold at the most (in its sphere or belly) an Ounce of di-Itilled water, and not less than this if possibly thou canst, but get it as near the measure as possibly thou canst; let the glass have a neck of the height of one palm, or hand-breadth, or span; let it be clear and thick, the thicker the better, fo it be clear and clean, to discover the actions which are within it; let it not at all be thicker in one place than in another: The proportion of matter to this glass, let it be half an Ounce of Gold, with an Ounce of g, which is two to one, and if thou add three to one of the g, yet the whole Compound will be less than just two Ounces, and this proportion is exquisite: Moreover, unless the glass be strong it will not hold in the fire; the winds which are in the vetlel in the forming of our Embryo, which will eatily

CHAP.

63

break a flight vetfel. Let the glass be feaied at the top, with fo great caution. that there be not the least hole or chinck. clie the work would be destroyed. So you fee that our Work as to our Principles, costlier than the price of threet lorent, yet in the making of the water, the price of what enters into a pound will hardly excced a brace of Crowns. There wants ! confels some instruments, but they are por deer; and if you had my distilling Instrument, you may easily excuse the ute of brittle glatles: yet there are tome Doctors who dreams. That the price of one Imperial or Crown will fuffice for the whole Work, to whom I have a resdy answer to return, that is, That I by that perceive, that they speak without a my Basis of Experiment. For there are in the Work other things that are prenous and require charge. But they will urge out or the Philosophers, That all which may be bought for a great price. will be found a falle Principle in our Work. To whom I may answer, And what is our Work? Namely, to make the Stone. That indeed is our finall work, but our main Master-piece is, To find a moilture

moisture or humidity, in which the o will melt, as Ice in warm water. This is our Work to find, for this many feek, even to weariness; to attain this g of o, others for the g of the p: but all in vain. for in this our Work, whatsoever is sold deer will prove deceitful. Verily I fay, That of the material Principle of our Water, as much may be bought for the price of one Floren, as will prepase or vivifie two whole pounds of our g, it may become true Philosophical & so much lought. Out of this we make a sol, which by that time it is perfect, is hardly so little chargeable to the Artist, as if he had bought it at the price of the most fine o; for it is indeed as good in all other essayes, and far more excellent in our Work. Moreover, we need Glasses, Coals, Earthen-vellels, a Furnace, Ironvessels and Instruments, which are not to be provided for nothing 5 away then with these Sophisters, their vile pratting, impudent lyes, by which they seduce many. Without our perfect body, our offspring of lenus and Diana (which is pure Gold) there can never be any tindure permanent. So then, it is, in respect nationly very 64

& wich wo

CHAP. 18.

Of the Philosophical Furnace or athanor.

F & we have spoken, its Preparati-Jon, Proportion and Vertue; of 2 also, its necessity and use in our Work; which how they are to be Prepared, I have shewed; how to be mixed, I have taught; of the vessel also, in which they are to be scaled, I have discovered much: which are all to be understood with a grain of falt, elfe if you proceed too literally, you may happen to erre oftentimes; the which the unufuel can doe: For we have so mingled our Pialosophical subtleties with unusual cardor, that unless you facil out many Macapture in four foregoing Chapters, your Harvest will hardly prove better than loss of Time, Colts and Pains; as for

Example: Where we, without any ambi- we day o, guity, told you that one of our Princi- down had in. ples was 2, the other of 3, one common-Art: If you know not the latter, you know not the subject of our Secrets, and may instead of it, work in Sol vulgar ; ret militake me not, for our o is in all exmens good Gold, and therefore it's vendible, that is, it may be (if reduced to a Metal) fold without any scruple: well a find But our Gold is not to be bought for money, though you would give a Crown or Kingdom for it, for it is the gift of God, for our Gold is not to be had made to our hand (at least not commonly.) But that hast and before it comes to be our o, it stands in need of our Art, yet thou mayer in o and o vulgar also seek our sol and find it, if thou feek aright. So then our Gold h the next matter to our stone, and o and vulgar are near matters, but other letals are the remote matter, and those hings which are not Metalline are most temote, that is alien from it. I my self ave fought it in a and a vulgar and found , yet it is a far easier work out of our luter to make the stone, than to ab- a saturat

I fear will prove a Labyrinth to thee, ex-

stract our true Matter out of any vulga Metal; for our Gold is a Chaos; whok foul is not put to flight by the fire; but Gold vulgar is a body, whose soul is to tired into a strong hold, that it may then be defended from the violence of the fire; therefore faith the Philosophers, The the Fire of Vulcan is the artificial deal of the Metals, and as many as have fur fered fusion have in it lost their Life. thou can't apply it wittily, both toth . seld a Resimperfed body, and to thy Fiery Dragos 12,14,17 thou needest no other Key to all our & crets; for if thou wilt teek our o in middle substance, between pertection as imperfection, thou mayest find it: 'A loofe the body of common Sol, which an Herculean Work, and it's called the fi Preparation, by which the Incantari is loosed, by which its body was both from performing the part of a Male. thou goest in our former way, thound delt a most benign fire from the beg

ning to the end; but if thou entrelt

Fiery l'ulcan, luch as we use in multiple

tion, when corporal o of vulgar s is

ded to our Elixir for a Ferment,

cept discretion help thee out of it. Yet in either, one progress or other, thou art in need of an equal and continual heat, whether thou workest in o vulgar, or in our o only. Know also, That'er in . O, thy & in both Works, although it be one Mat leg ! radically, yet it's far different in its Preparation. Also thy stone with our Gold thall be sooner persected, by two or three "by many Moneths, than our first Matter shall be made to appear out of either o or's vul-lor D soulger gar; and the Elixir of the one will be at the first degree of persection, of a

the third Rotation of the wheel. Moreover, if thou work with our Sol, a cidah inthou must make Cibation, Imhibition and the first Fermentation, by which its force will be made in a manner infinite; but in the other Work thou must first illuminate it, xincirale and incerate it , as the great Rojary teacheth abundantly: Lastly, If thou work in our Gold, thou mayest calcine, putrehe and purifie, with a most benign fire of Nature within, helped from without with Bath, as if it were of Dung or Dew 9 but if thou work in o vulgar, thou must

greater vertue by far than in the other at

first sublime and boyl this Compound till fit to be united with Virgins Milk.

do any thing without fire: It was not then in vain, that the Truth-telling Hermer, next to the Father o, and Mother o, reckous the fire as the third or governour of the whole. But this is to be understood of the truly secret Furnace, which

a vulgar eye never faw.

There is also another Furnace, which

is called Our common Furnace, which is either of Brick or Potters Loam, or of Iron or Copper plates well luted within; this Furnace we call an Athanor, whole form, that best pleaseth me, is a Town with a Nest. Let the Tower be about two Foot high or more, and nine Inches with the plates, or a common er a common span; about two Inches broad below of Les in An Grade each fide, and fo about feven Inches high er dien of or eight at the most 3 that where the fire is, may be thicker of Clay than at top, but of a smooth ascent, somewhat taper. ing; next to the bottom or foundation; the land agrate of a little more, and a grate of least the and stone firted to it 3. a little above the in wickers grate wasn it will not be avove an of a smooth ascent

grate about an Inch high, let there be two boles which may give vent into a Nest, which must be close joyned at the side, the holes let them be about an Inch diameter, and the Nest capable to receive three or four Egg-glailes, and not too large; let the Nelt and the Tower be very free from cracks, and let the Nest have no scope downwards below the disha but that the fire may come immediately under the platter, and so forthat two, three, or four holes, and let the Nelt have a cover with a window in it, where I glass about a Foot high may stand, or elle the top of it let out at a hole above; and being thus ordered, set your Furnace in a lightforme place, and the Coals are to be put in at the top, first live ones and then others, and the top to be shut from all Air with a cover, and fifted ashes in the joynts of it. In such a Furnace you may do the Work, from the beginning to the end.

But if you be curious, you may find other, and other waies of administring a due Regimen of Fire. Let then, for a general Rule, such an Athanor be made, in which, without motion of the glass, you

F 3 may

Secrets Revealed.

may give what degree of heat you will, from a feverish heat to a soft reverbering or dark red, and in its highest degree, let it last at least ten hours or eight, without recruiting with Coals, for less time is toyliom to the Workman; then

hast thoughe first gate open.

Thou mayest, when thou hast the Stone, make the fore-mentioned Furnice portable (as I my felf have) for it is cafily portable, and the Operations are the line wall not lo tedious, but very short, and so a more ship need no great Furnace; which would fine of agent, be worse to carry about, and more trouble than the rifing a little fooner than ordinary, to recruit a fmall Furnace with Coals for about a Weekes time, or two or three at the most, in the time of Multiplication, i of

The state of the s

regular than to be tailed to be med ma logic far

CHAP. 19.

Of the Progress of the Work in the first Forty Dayes.

Aving prepared our Sol and our g, Thut them in our Vessels and govern them with our Fire, and within Forty Dayes thou shalt fee thy whole matter turned into a shadow or Atomes, without any visible mover or motion, or without any heat perceptible to the touch, fave only that it is hot.

But if you be yet ignorant both of our Saus and of our g, meddle not in this our Work, for expence only will be

thy lot, and no gain nor profit.

But if only thou want the full discovery of our Sun, having throughly attained the skill of our &, and knowest how to fit it to the perfect body, which is a x lo thy

great Mysteric.

Then take of o vulgar well purified one part, and of our g first illuminated three parts, joyn them as was before. taught, and fet them to the Fire, giving a heat in which it may boyl and sweat;

CHAP.

let it be circulated day and night without cealing, for the space of ninety dayes and nights, and thou shalt see in that space, that thy gwill have divided and reconjoyned all the elements of thy Gold; boyl it then other fifty dayes, and thou shalt see in this Operation thy ovulgar turned into our o, which is a Medicine of the first order: Thus doth it become our true 4, but it is not yet a teyning Tincture. Trust me, many Philotophers have wrought this way, and attained the Truth, yet it is a most redious way, and it's for the Grandees of the Earth. Moreover when thou halt got this 2, do not think that thou hast the Stone, but only its true Matter; which in an imperfect thing thou mayest seek, and it is a week, with our ease, but rare way, which God hath referved for his poor contemned and abject Saints: Of this thing I have now determined to write much, although in the beginning of this Book, I decreed to bury this in filence; for here lies the knot on which the grand sophism of all the Adept is built : Some write concerning @ 2nd " vulgar, and they, write mue; and again

Recrets Revealed.

others deny o and D vulgar, and they alto fay true. I being now moved with Charity, will now reach forth my hand, and therein I dare appeal to all the Adepti that ever wrote, and tax them all with Envy, yea, and I my felf that had resolved to tread in that same path of Envy, but that God did inforce me beyond what I intended, to whom be everlatting Praise. I say then that each way is true, for it is but one way in the end, but not in the beginming; for our whole Secret is in our g, and in our @ 3 our g is our way, and without it nothing is done; our o also is not ovulgar, yet in o vulgar is our o, else how could Metals be homogeneal? If then thou know how to illuminate our & Vile 1.69,72. as it ought to be, thou mayest for want of our o joyn with Gold vulgar, but want yet know that the acuation of the gought to be different for the one, and for the other, and in a true Regimen of them, in an hundred and fifty dayes, thou shale have our o, for our o naturally comes out of our g: If then o vulgar be by our g divided into its Elements, and afterwards joyned, all the mixture, by the help of the fire, will become our o,

which

1 prepare

which then being joyned with that &, which we'prepared, and call our Virgin Milk, by reiterate decoction it will give all the figns which the Philosophers have described, in such a fire as they have written of in their Books.

But now if you shall in your Decodion of o vulgar (though it be most pure) use that same y which is used in our o (though both flow from one root in gemeral) and apply that Regimen of heat, Wrought it in Sol, and there I found it. Yet which the Witemen in their Books have there is in the Metallick Kingdom one applyed to our Stone, thou are without thing of a miraculous Original, in which all doubt in an erroneous way, and that our Sol is nearer to be fought than in Sol is the great Labyrinth in which almost all and a vulgar, if it be fought in the hour nov. 279. young Practitioners are entangled, for of its Nativity; which melts in our which then by relative to one end, yet with this

and incombustible, and whose Tincture will abide all Tryals; also in this sense, our Stone is in every Metal or Mineral, foralmuch as o vulgar may be extracted. out of them and out of that oour o my be made, as being nearer in it than my Metali. So then our Stone is in all Metals, but in our o and o nearer than inany other; Therefore , faith Flammel , some wrought it in 4, some in 7, but I' there is scarce one Philosopher who in his like Ice in warm water, and yet it hath god; his is the Writings doth not touch both wayes: a refemblance with Gold: This is not to while and & her which is indeed but one way fundament be found in the manifestation of Sol vultally, only one is more direct to the Mark gar, but by revealing that which is hid- sol vulgarful than the other: They then that do write of ten in our g; the same thing may be by notating in o vulgar, as we sometimes in this Treatile, sound by Digestion in our g for the space of the space for also Artephius, Flammel and Ripley, with of an hundred and fifty dayes. This is young a formal for also Artephius, Flammel and Ripley, with of an hundred and fifty dayes. This is young a formal for all formal many others & We are not otherwise of our Gold, fought the farthest way about, be understood, but that our Philosophical which is not yet of so great a vertue as o is to be made out of o vulgar and out that which Nature hath made and left to which then by reiterate Liquefaction our hands; yet turning the wheel thrice,

difference,

the fee in warm water, and yet it hath , God; his is the a resemblance with Gold: This is not to will and & but be found in the manifelaction of Sal vul- found in the an gar, but by revealing that which is hid- sol valgeredlen in our g; the same thing may be by residing in bund by Digestion in our g for the space of an hundred and sirry dayes. This is y same string to the same string t our Gold, fought the farthest way about.

difference, what thou findest in the one in seven months, thou must wait for in the latter the space of a year and a half, or it may be two years. I am acquainted with both wayes, and commend the first to all ingenious men, but in my Descriptions I have most touched the hardost way, lest I should draw on my head the Anathema of all Philosophers; know then, that this is the only difficulty, in reading the books of those that are most candid, that all, one as well as the other, do vary the Regimen, and when they write of one Work they fet down the Regimen of another, in which snare was entangled my felf at first, and it was long before I could get free out of this Net.

Know then that the Fire in our Work is most agreeable to Nature, if thou understand our Work aright; but if thou work in Sol yulgar, that properly is not our Work, and yet it leads directly into our Work in its determined time; but in it thou needest a strong and long decoction, and a proportionable time; then mayelt thou go on the second Operation with our most benign Fire, with our

Tower and Athanor, which I chiefly commend.

If then the Work in sol vulgar be fure to procure the Marriage of Diana, Venus Duyling Draw p in the beginning of the Espousals of thy 259 g, then put them into the Nest, and in their met a due heat of Fire thou shalt see an emblem of the great Work, to wit, Black, White, Citrine and Red; then reiterate this Work with g, which we call our and at g and Virgins Milk, and set it in a heat of Balneum Roris at the highest ; let it be a heat of ashes mixed with sand; then thou shalt see not only the black but the blackest black, and all blackness; so also both the white and the red complete, and this with a gentle process; for in the fire and the wind God was not, but in the still Voice be spoke unto Elias.

Therefore if thou knowest the art of it, extract our sol out of ourg, then shall thy Secrets spring all out of one Image, which, trust me, is more perfect than any worldly perfection, according to the Philosopher; If, faith he, thou know how to make the Work out of galone, thou halt be Master of a most pretious Work. la this Work are no superfluities, but the

whole (by the Living God) will be turned into purity, because the action i

Secrets Revealed

only in one thing.

But if thou shalt proceed in our Work with Salvulgar, then the action and pation is a twofold substance, and only the middle substance of both is taken, and the Faces rejected; if you do but medtare well on what I have told, in few words, you have a key to openall the appearing Contradictions which are a monest the Philosophers, therefore Riph teachetif to turn the wheel round thrice, in his Chapter of Calcination, to which Relations his threefold Doctrine of Proportions agreeth, wherein he is ven mystical, and those three different proportions agree to three several Works: one Work is most secret and purely natural, which is with our g and our Sol, to which Work belong all the figns described by the Philosophers. This Work is done neither by fire nor by hands, but only by internal heat, and the external is only expelling cold and overcoming its Symptomes.

The other Work is in Sol vulgar, put ged, with our \$ 5 this operation is done

with a strong fire, and in a long time, in which both are decoded by the mediati- Par in Rige. on of Venus, so long until the pure sub- + 360 stance of each be sublimed, which is the true juyce of Lunaria, this is to be taken, and the faces are to be rejected; this is not yet our Stone, but our true 4; which then is to be decocted again with our g, which is its own blood, by which decoction it becomes a Stone, penetrative and teigning.

Thirdly and Lastly, There is a mixt Work, where o vulgar is mixt with our y in a due proportion, and a Ferment of our & is added as much as is futficient; then are fulfilled all the Miracles of the World, and the Elixir becomes able to furnish the Possessor both with Riches and Health: Seek then our 4 with all thy might, which, believe me, thou shalt

find in our g.

If Fates thee call.

Otherwise chuse sol vulgar, and work on it with a due proportion of heat, and out of it (in time) thou shalt prepare our Sol and Luna; but it's a way hedged with infinite briars, and we have made a Vow unto God and Equity, that we would ne-

CHAP. .20.

Of the appearing of Blackness in the Work of Sol and Luna.

If thou shalt work in Sol or D, to our the in them consider if you see this matter like to paste, and to boyl like unto water, or rather like to melted pitch; for our sol and a have an emblematical Type in Sol and a have an emblematical Type in sol vulgar, joyned with, and decoded in

in our g: When thou hall kindled thy Furmee, wait for the space of 20 dayes and nights, in which time thou shalt observe divers colours, and about the end of the, fourth week, if the fire be continual, thou halt see a most amiable greenness, which will be seen for about ten dayes, less or more, then rejoyce, for without doubt in a short time thon shalt see it like unto a coal in blackness, and all the members of thy Compound thall be turned into Atomes, for the Operation is no other than a Resolution of the fixt in that which is not fixt, that afterwards both being joyned together, may make one matter, partly spiritual, and partly corporal: Therefore faith the Philosopher, Takes Corascene Dog and Bitch of Armenia, joyn them together, and they shall beget thee son of the colour of the heaven; for these Natures, in a short decoction, shall be turned into a broth, like unto the foam of the Sea, or like a thick cloud, which hall be tinctured with a livid colour; and once more I may assure thee, that I have not hidden any thing save only the Regien, and this, if thou art wife, thou bult easily collect from my Lines: Suporgines, lake

X colours

· Becrets Revealed. poling then that thou wile learn the Regi-Mor Supposing then I fou hast havet be Regi

Make the Stone which I have told you of before, and govern it as you know how, and there shall follow these notable things; first, as soon as our Stone shall feel the fire, it shall flow (its & and its & together) upon the fire like to wax, and the & shall be burned, and the colour shall change day by day ; but the g is incombustible, only it shall be affected with the colours of the 2 for a time, but it cannot be radically affected, therefore it will wash Lettor clean from all its filth; reiterate the heaven upon the earth, w long and so often, until the earth receive a spiritual and heavenly nature: Oblef sed Nature, which doth that which is impossible for Man to do! Therefore when h thy glass thou thalt see thy Natures to be mingled like unto a coagulated and burnt blood, know that then the Female embraced by the Male: Therefore after the first stirring up of the Matter, exped that in 17 dayes thy two Natures shall

be turned into a bloody or fatted Broth,

which shall be turned round together,

like unto a thick Cloud, or the foum of

the Sea, as is before faid; and the colour of it will be exceeding obscure; then be fure that the Kingly Child is Conceived, and from that time thou shalt see vapours, green, blew, black and yellow, in the Air or Fire, and at the fides of the Vessel. These are those Winds, which in the forming of our Embryon are very frequent, which are to be kept warily, left they fly out, and the Work be destroyed; beware also of the Odour, lest it happen to exhale at any chink for the vertue of the Stone would thereby get a most notable detriment; therefore the Philosopher commands to keep the Vessel close fealed, and beware that you do not break off abruptly from the Work; neither open nor move the Vessel, nor yet intermit the Operation not an hour, but continue the Decoction till you see the moisture begin to fail, which will be in about thirty dayes; then rejoice, and rest assuted that thou art in the right way. Attend the Work vigilantly, for in about two weeks from the time, thou shalt see the whole earth dry and notably black, hen is the death of thy Compound at and, the Winds are ceased, and all are

4 Secrets Revealed.

rest and quietnes. This is the satal Ecclipse of the Sun and of the Moon, when no light shall shine upon the Earth, and the Sea shall vanish, then is made our Chaos, out of which, at the command of God, shall proceed all the Miracles of the World in their orders.

C.HAP. 21.

Of the Burning of the Flowers, and how to prevent it.

The burning of the Flowers is an errour of fatal confequence, yet food committed before the Natures which are tender and extracted from their profundity, they are oftentimes burnt; this errour is chiefly to be heeded after the three weeks; for in the beginning there is so much moilture, that if the Work be governed by a stronger fire than is convenient, it being brittle will not bear the abundance of winds, but will suddenly thy in pieces, unless the glass be too large, and then sure the vapours will be so our of measure dispersed, that they will hard by return again to their body; at leak

not so much as is necessary for the refreshment of the Stone. But so soon as the earth shall begin to retain part of its water, then the vapours decreasing, the fire may be strengthened without danger worthings. of the Vessel; but the Work will nevertheless be destroyed, and will have a colour of a wild Poppie, and the whole Compound will at length become a dry and unprofitable powder, of a half red colour: Thou shalt conclude from this fign, that thy fire hath been too strong, so strong, to wit, as to hinder true conjunction; for know, that our Work doth require a true change of Natures, which cannot be until an entire union of both Principles be made; but they cannot be united but in the form of water, for bodies may be confounded or blended together, but cannot be united, nor yet can any body with a spirit be united per minima; but spirits with spirits may well be united, Therefore our Operations must become Homogeneal Metallick Waforegoing true Calcination, which there-

fore is not an expectation, which there-

G 3

Which & rards into

which when they become more finbtle than the exigence of the earth requires fearth is then actually transmuted into, and doth receive the form of Ferment of water; bur if the fire be too vehement, this spiritual Nature being struck as with not achies will a fatal stroke, our active will become pallive, of spiritual corporal, evena red unprofitable precipitate, for in a due heat the colour will be as black as that of the Crow, which though it be dark yet it's most desirable; yet there is also a blacknels which will appear in the beginning of the true Work, and that very remarkable, but this is ever accompanyed with a due proportion of moisture, and sheweth that heaven and curth have been in conjunction, between which the fire of Nature is conceived; by which redness all the concave of the glass will feem as it were gilt over with Gold, but this colour is not durable long, but in a short space will be changed into a greennels, then in a very thort time expect blackness; and if thou wilt be patient, thou for certain shalt fee thy defire accomplithed, at least make flow, but sure progrets. Let not thy heat be over strong,

and yet strong enough, and between Salla and Charibdis fail like unto a skilful Pilot, so shalt thou attain the wealth of either India; sometimes thou shalt see as it were little Islands floating, and shooting out as it were little sprigs and buds, which will be changeable in colours, which foon will be melted and others will arise in the stead of them; for the earth at were inclining to Vegetation, is alwaies fending forth some new thing or other 5 sometimes thy fancy will be that & thou feelt in thy glass Birds or Beasts, or creeping things, and thou shalt each day behold colours most beautiful to fight, which though they are pleasant to the eye are not of a long continuance; all is in the keeping of a due heat without any intermission: So shall all these pleasant colours in the space of fifty dayes end in a colour most black, and a powder discontinuous, which if thou seest not, blame either thy gor thy Regimen, or the disposition of the Matter, unless thou either hast moved or medled with the glass; which may either protract or finally destroy the Work.

G4 CHAP.

CHAP. 22.

The Regimen of Saturn, what it is, and whence it is denominated.

S many of the Wife men as have wrote of this Master-piece of Phi-Josophy, have all spoken of the Regimen of h, which many (understanding wrong) have turned aside unto divers errors, and deceived themselves with their own opinion ; Tome being thus led with a great deal of confidence, although with very of confiler little advantage: But know that our h is more noble than any Gold, it's the Limus in which the foul of our Gold is joyned with its \$, that after they may produce Adam and Eve his wife; therefore that which is the highest shall so humble it felf as to become the lowest, then expect that he will redeem all his Brethren by his blood. The sepulchre in which our King is buried is named his , of wis ort our Work, and its the Key of the Work of Transmutation; O happy is he that may behold this flow Planet! Pray to God, my Brother, that he would vouchhim that willeth, nor of him runneth, but on the Father of Lights alone, this blessing dependeth.

CHAP. 23.

Of the various Regimens of this Work.

DE certainly confident studious Son of DArt, whoever thou art, that nothing is hidden in this Work, save only the Reeimen, of which, that of the Philosopher may be verified, Whoever is Ma-Her of that Science, Princes and Grandees of the Earth shall honour him. I affure you, upon the word of an honest Man, that if this one Secret were but openly discovered, Fools themselves. would deride the Art; for that being known, nothing remains, but the Work of Women and the play of Children, and that is Decoction': So that not without cause did the Wise men bide this Secret with all their might; And rest assured that we have done the fame, whatever we have feemed to speak concerning the de-

gree

hunter to the stand cala of the stacky 4 lby it may mor it and a price are wel Secrets Revealed. Secrets Revealed. his Companion being dead at first, and decoct them together in a convenient de-dien 62 fo remains a great space; and this Secret gree of fire, otherwise they will not be the before me no man ever yet discovered:
Therefore when thy Matters are joyned, altered; he who will affirm the contrary, is no Philosopher: They who wander in which are our o and our &, do not think as some Alchymists vainly imagine, that Errours Path, do dream that it is a matter & Made of very light concernment to diffoive the jour of it the fetting of the Sun will follow fudperfect bodies in our g, in so much, that (" " " denly, no verily, we waited a long and teaccording to their imaginations, Gold in the dar he) dious while before a reconciliation was this will be devoured in the twinkling huma men-Tally 4- made betwirt the water and the fire; and of an eye; not well understanding the this the envious have in a short speech place of Bernard Trevisan, in his Parable Warning mystically comprehended, when they in concerning his Golden Book irrecovera-him. And we the first beginning of their Work, called bly drowned in his Fountain. But how that your got mantheir Matter Rebis, that is, made of two hard a Work it is to dittolve Bodies, they but fifthe to Substances, according to the Poet, can witness who have taken pains in this dissolution; I my self, who have been black-Res Rebis est bina conjuntta, sed est tamen una. oft taught this Letion by ocular testimo- are, the form Solvitur, at prima fint ant Sol ant Spermata Luza ny, can be a witness, that it is a most ingenious thing to govern the fire, even afterseeds Robis are two things joyn'd, yet is but one. the matter is prepared, such a fire as may work of any. Mis Diffolo'd, that Sol or Lune be Sperm alone dissolve the Bodies as they ought to be dissolved, without burning their tindures. For know of an undoubted truth, that Attend then to my Doctrin: Take the Bothough our g devour the o, yet it doth dy which I have shewed you, and put it innot so as Chymical Phantallicks dream, to the water of our Sea, and decoch it confor although the 5 joyh with our 9, yet a tinually with a due heat of fire, that both year after you shall separate each from Dews and Clouds may ascend, and drops the other in its own nature, unless you may descend, both night and day, without

washing been for much family the

intermission; and know, that in this Circulation the g doth arise in its former nature, and leaves the body beneath its former nature, so long until after a long time the body begin to retain part of its foul, lo by degrees both begin to partake each of other, but because the whole water doth not ascend by sublimation, part of it remains below in the bottom of the vessel, therefore is the body boyled in the water that remains beneath, and by its means it is fifted, and the drops which are continually running down do perforate the maffe marveloufly, and by continual Circulation on the water is made more fubtle, and doth sweetly extract the foul of the Sun; so by the mediation of the soul the spirit is reconciled with the body, and an union of both is made at the utmost within fifty dayes; and this Operation is called the Regimen of g, because the g is circulated above, and in it the body of the Sun is boyled beneath, and the body is in his work pathive, until the colours thall appear, which will be a little about the twentieth day in a good and continual ebullition; which colours are afterwards increased, multiplyed and varied, until

all be at last completed in black of the blackest most black, which the fiftieth day will give thee,

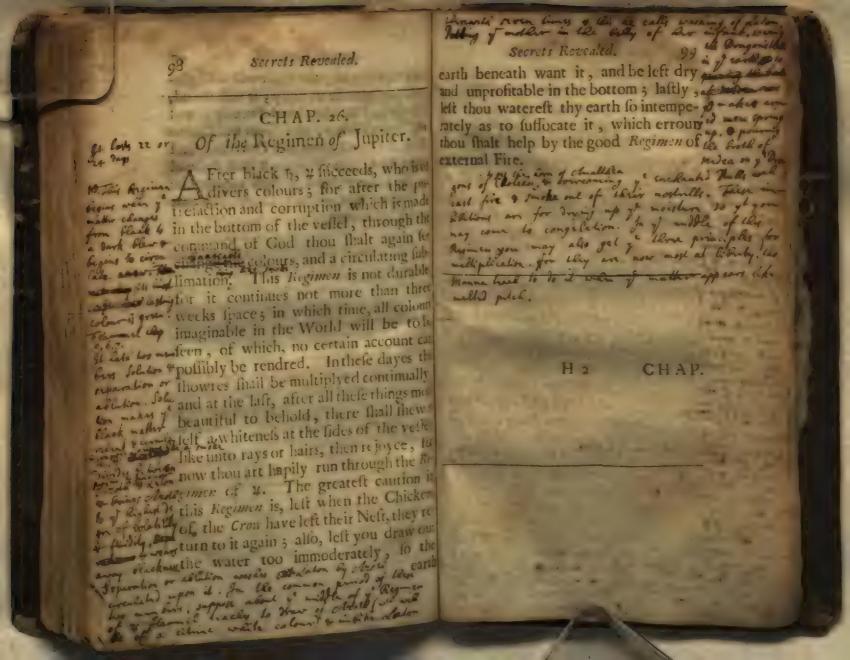

(If Fates thee call.)

CHAP. 25.

Of the Second Regimen of the Work, which is of Saturn.

Aving run through the Regimen of Lag, which is to strip the King of his golden Robes, to assault the Lion with divers conslicts, to weary him, and at length to kill him; the next Regimen that apears is that of h, for it is the will of God that the Work, when once it's begun, should be carried on even unto the end, and the law of thoseOperations is, that the ending of one, is the entrance of another; the period of one, the beginning of another: Nor doth the Regimen of g fooner pass away, but his successor b comes in, who is the next higher in fuccellion; the Lion dying, the Crow is ingendred: This Regimen lineal in respect of the colour, for there is but one only colour, and that is the blackest

black,

the many political

GHAP. 31. The Fermentation of the Stone.

Emember now that thou hast got our 1 4 red and incombustible, which can by no fire be promoted further of it felf, and be very wary, which I should have told you in the former Chapter had I not forgot it, that in the Regimen of the Citrine Sun, before this supernatural o be born, which is adorned with a true Tirian colour; lest, I say, thou then vitrifie thy Matter with too great fire, for fo it would be after infoluble, and by consequence eannot be coagulated into these glorious Atomes, Red of the Reddelia Be wary then that thou destroy not so great a Treasure, and yet do not think that thy Labour here hath an end, but proceed further, that out of this 2, by reiterate folution and coagulation, thou is for sarbamayest have our Elixing: Take then of most fine Gold three parts, and of this ? one part, thou mayest take four parts of o and a fifth part of our 2, but the afore. laid proportion is better; melt the oin a clean Crucible, and when it melted put thy \$\perp\$ into it, but very warily, lest you lose it by the smoke of the coals, let them flow together, then put them forth into an Ingot, and thou shalt have a Mass, which may be pulverised, of a most glorious Red colour, but hardly transparent; then take of this Mass coastly pulverised one part, of thy Sophical \$\pi\$ two parts, mix them well, put them in a glass, which seal, and govern it as before two moneths, in which time thou shalt see all the foresaid Regimens pass in their order. This is true Fermentation, which thou mayest, if thou wilt, reiterate.

CHAP.

. 12

CHAP. 32. The Imbibition of the Stone.

Know that many Authors do take A Fermentation in this Work for the internal invitible Agent, which they call Ferment, by whole virtue the fugitive and subtile Spirits, without laying on of hands, are of their own accord thickened; and our forementioned way of Fermentation they call Cibation with Bread and Milk, to Ripley; but I (not uling to cite other Authors, nor yet to Iwear to their words in a thing which I my felf know as well as they) have followed my own judgement in my Writings. There is then another Operation, by which our Stone is increated in weight more than virtue: Take of thy 2, white or red, and to three parts of the 2 adda fourth part of the water, and after a little blackness, in six or seven dayes decoction, thy water newly added thall be increased, or thickened, like unto thy 45 then add another fourth part, not in respect of the whole Compound, which

is now increased a fourth part by the first Imbibition; but in reference to thy first 2 as thou tookelt it at first, which being dryed add another fourth part, and let it be congealed, with a convenient fire, then put to it two parts of the water in reference to the three parts of the \$ which thou tookest at first, before the first Imbibition, and in this proportion, imbibe and congeal three other times, at last add five parts of water in the seventh Imbibition, still remembering to reckon the water in reference to the \$ as it was taken at first; scal thy Vessel, and in a fire like to the former make thy Compound pass through all the foresaid Regimens, which will be done in one moneth, and then thou hast the true Stone of the third order; of which one part will fall on a thousand, and teyn perfectly.

CHAP. 33: 618 on ricola The Multiplication of the Stone.

TO this is required no labour, fave I only that thou take the Stone, being perfect, and joyn it with three parts, or at the most with four parts of g of our first Work, and govern it with a due fire, in a Vessel well closed, so shall all the Regimens pass with infinite pleafure, and thou shalt have the whole increased a thousand fold beyond what it was before the Multiplication of it; and if thou shalt reiterate this Work again, in three dayes thou shalt run through all the Regimens, and thy Medicine shall be exalted to another millinary virtue of Tincture; and if thou yet shalt reiterate the Work, it will be perfected in a natural day, and all the Regimens and Colours shall pass, which will be done afterwards with another reiteration in one hour, nor shalt thou at last be able to find the extent of the virtue of thy Stone, it shall be so great that it shall pass thy Ingenuity to reckon it, if that

thou proceed in the Work of reiterate Multiplication: Now remember to render immortal Thanks to God, for thou now hast the whole Treasure of Nature in thy possession.

Of the manner of Projection. ..

Ake of thy Stone perfected as is 1 said, white or red, according to the equality of the Medicine, take of either o or D four parts, melt them in 1 clean Crucible, then put in of thy Stone, white or red, as the Metal that is melted is in quality, and being well mixed together in fusion, pour them into an Ingot, and thou shalt have a Mass which is brittle ; take of this Mass one part, and well washed ten parts, heat the? till it begin to crack, then throw upon it this Mixture, which in the twinckling of an eye will pierce it; increase thy fire till it be melted, and all will be a Medicine of inferior virtue; take then d this, and calt one part upon any Metal, purged and melted, to wity as much as it can teyn, and thou shalt have most pure or D, purer than which Nature cannot give. But it is better to make Projection gradually, until Projection cease; for so it will extend farther; for when so little . ..

little is proiected on so much, unless Projection be made on v. there is a notable
loss of the Medicine, by reason of the
Sceries which do adhere to impure Metals; by how much then the Metals are
better purged before Projection, by so
much more will the Matter succeed.

3 CHAP

" CHAP. 35. Of the many Uses of this Medicine.

TIE who hath once, by the Bleffing of God, perfectly attained this Art, I know not what in the World he can wish. but that he may be free from all snares of wicked men, so as to serve God without distraction. But it would be a vain thing, by outward pomp to feek for vulgar applause, such trifles are not effected by those who have this Art, nay rather they despise them: He therefore whom God hath bleffed with this Talent, hath this field of Content, which far exceeds popular admiration; first, if he should live a thousand Years, and every day provide for a thouland men, he could not want, for he may increase his Stone at his pleasure, both in weight and virtue, so that, if a man would, one man that is an Adeptist, might transmute into perfect Gold and Silver all the imperfect Metals that are in the whole World; secondly, he may by this Art make previous Stones and Gems,

fuch as cannot be paralelled in Nature, for goodness and greatness.

Thirdly and Lastly, he hath a Medicine Universal, both for prolonging Life, and Curing of all Diseases, so that one true Adeptift can easily Cure all the fick People in the World, I mean his Medicine is sufficient.

Now to the King Eternal, Immortal and sole Almighty, be everlasting Praite, for these his unspeakable Gifts, and unvaluable Treasures.

Whosoever enjoyeth this Talent, let him be fure to employ it to the glory of God, and the good of his Neighbours, lest he be found ungrateful to God his Creditor, who hash blessed him with so great a Talent, and so be in the last day found guilty of misproving of it, and to condemned.
